

ARCHITECT for SharePoint

MetaVis ARCHITECT for SharePoint 2010 allows information architects to develop and maintain efficient SharePoint taxonomies. **ARCHITECT** visualizes a SharePoint environment through two-dimensional graphical diagrams allowing users to edit diagram elements and provision or synchronize updates to SharePoint. As an architect or a business user, the ability to graphically visualize the metadata environment provides the system-wide awareness necessary to design taxonomies that improve search and eDiscovery. MetaVis diagrams not only expose metadata structures but also their relationships, making SharePoint sites easily understood and well documented.

When you are ready to roll out a new taxonomy, **MetaVis ARCHITECT** connects to SharePoint and compares the new design versus the current environment. Upon approval, the system automatically deploys individual, selective or all changes to your environment in seconds.

MetaVis ARCHITECT lets you easily create a SharePoint taxonomy graphically. Load, synchronize, and provision your new taxonomy quickly, thanks to **ARCHITECT**'s full integration with SharePoint.

- *Create and reorganize metadata to improve Search, Findability and eDiscovery*
- *Reuse entire taxonomies or individual metadata types from other places by simply dragging them into the diagram*
- *Provision to any SharePoint Site or Server (internal or hosted)*
- *Set up new sites in seconds*
- *Create, modify, and remove lists & libraries easily*
- *Document & Annotate diagrams for future reference*
