

ECM MIGRATOR for SharePoint

MetaVis ECM MIGRATOR helps organizations to copy content between legacy ECM systems (eRoom, LiveLink, Documentum and Lotus Notes) and load files in bulk from the legacy file system into a SharePoint environment while retaining critical content characteristics such as document properties, column values, and version history.

MetaVis ECM MIGRATOR enables users to easily and rapidly migrate complex repository structures to a secure SharePoint environment. By migrating content out of legacy ECM systems and into a SharePoint environment, you increase content collaboration throughout your enterprise while reducing expenses associated with maintaining multiple repositories.

MetaVis ECM MIGRATOR for SharePoint utilizes a familiar Windows Explorer user interface, allowing users to drag-and-drop items. Its deployment characteristics simplify use in complex IT environments. The majority of the functions are performed using out-of-the-box SharePoint interfaces (APIs) and do not require any components or agents installed on the SharePoint server. In addition, it enables support for Microsoft Online and other hosted SharePoint deployments. A small MetaVis WEB Service installed on the target SharePoint WEB Front End enables retention of core item properties, like created by, modified by, created at, and modified at.

- ***Drag and Drop user-friendly interface that makes it easy to migrate content, schedule and events***
- ***Security model which is fully integrated with the content repository model for secure access to the source repository***
- ***Automated migration scheduling for faster integration***
- ***Real-Time reporting to provide end-users with content when and where they need it***
- ***Move content, calendars, tasks and other complex objects, retaining all associated metadata***
- ***Works with eRoom, LiveLink, Documentum and Lotus Note.***
