

MIGRATOR for SharePoint

MetaVis MIGRATOR for SharePoint allows you to manage your migration to SharePoint 2010. Copy content between SharePoint servers and load files in bulk from the file system into the SharePoint environment while retaining critical content characteristics such as document properties, column values and version history.

MetaVis MIGRATOR for SharePoint enables users to:

- Intelligently copy sites, lists, libraries, folders or individual items between SharePoint site server farms for consolidation, upgrade, or compliance purposes
- Easily load files from network shares and local drives into SharePoint libraries

Many migration tools are priced to be used just once and require a lot of onsite services. **MetaVis Migrator** is designed to be used over and over again and requires little to no services for all your migration needs. Our software is quick to install and easy to use. This dramatically reduces the cost and timeline of migration projects.

MetaVis Migrator utilizes a familiar Windows Explorer interface, allowing users to Copy/Paste and drag-and-drop items. Its deployment characteristics simplify use in complex IT environments. The functions are performed using out-of-the-box SharePoint interfaces (APIs) and do not require any components or agents installed on the SharePoint server making it ideal for your secure hosted environment.

Why buy a single migration solution when you can own a complete solution from **MetaVis** for the same price? Contact us today to learn more about our migration solution and other enterprise solutions to help you manage and organize your SharePoint environment.

➤ Migrate Everything

- *Copy multiple selected items between folders, lists, sites or servers and simultaneously change or keep content types and column values*
- *Copy entire sites (with sub-sites), lists and libraries along with their content types and columns while retaining version history*
- *Load files and folders from file system to SharePoint library in bulk while assigning them a content type and column values*
- *Utilizes a familiar Windows Explorer interface, allowing users to Copy/Paste and drag-and-drop items.*

➤ Work with Metadata

- *Change content types and assign column values for multiple selected documents or list items*
- *Assign values to mandatory columns during file copy*
- *Save rules for column mapping as templates for re-use in the future*
