MICRO FOCUS RUMBA™ FTP

Business Challenge

Access to file systems and remote files must be easily accessed by all users in a secure fashion. When it comes to FTP, end users are presented with hundreds of options from shareware/freeware to browser based tools. The challenge to business is to enable end users with access to remote files while making sure administration costs do not skyrocket while at the same time preventing malware from entering the environment.

Some additional remote file access challenges are:

- a. New versions and patches of desktop operating systems and keeping up with FTP clients
- b. Ability for the end users to customize their environments
- c. Maintain uptime and stability with FTP clients
- d. Secure all communications to comply with standards
- e. Connect to various systems without increasing end user complexity

Product Overview and Key Benefits

Micro Focus RUMBA FTP is a graphical FTP client that combines ease-of-use with secure file transfer. With a Windows Explorer look-and-feel and support for SSH and SSL-based FTP, Micro Focus RUMBA® FTP offers a winning combination of secure, safe communications and ease of use.

RUMBA FTP enables business by:

- Supporting drag-and-drop file or folder transfer from one view to another or within the same view
- Encrypting logins, passwords and files with standards-based security protocols
- Connecting to a variety of FTP servers, including UNIX/Linux, iSeries, MVS and Windows
- Opening multiple remote sessions at the same time for server-to-server file transfers
- Automatically open remote files with associated file extensions

Detailed Feature Overview

- Communicate via SSH using Secure FTP (SFTP) or port forwarding
- Encrypt FTP sessions with SSL (FTPS)
- Pair with Micro Focus RUMBA Security Service for firewall traversal through HTTP tunneling
- Connect through a proxy server
- Record or create file transfer macros, then play back or edit
- Automate file and folder management tasks with OLE automation scripts
- Manage (create, edit, launch and disconnect) sessions in a single panel
- Wizard-based remote session creation
- Open multiple remote sessions simultaneously
- Configure a tree view or folder view of both local and remote file systems
- Drag-and-drop file transfer
- Automatically detect and set transfer mode based on the type of files being copied
- Display a confirmation message before copying or deleting files or folders on the remote networked computer
- Rename files as you copy them to the remote computer
- Transfer multiple files between PC and host systems and schedule AS/400 file transfers.
- Convert filenames to lowercase when you copy (default preserves name and case of the original file)
- View FTP commands sent to the remote server in real time
- Optionally open up a command line-based FTP session
- Log file transfer commands and directory listings to file

Product Specifications & System Requirements

Operating System Support

- Microsoft Windows Vista, Microsoft Windows 2000, Windows XP and Windows 2003

Hardware Requirements

- PC with Pentium-class processor 300 MHz (or faster)
