

Digital Guardian

OUTSOURCED DATA PROTECTION

Digital Guardian's Outsourced Data Protection Solution Pack is an optional package of pre-written rules and configuration settings designed specifically to protect the data shared by companies with offshore partners and other participants in their global outsourcing operations. Whether the outsourced business activity involves the sharing of source code, customer records, internal employee and/or financial data, Digital Guardian's core "Point of Use" control, monitoring, and auditing capabilities dramatically reduce the risk of data loss or misuse in these operations. The Outsourced Data Protection Solution Pack has been designed for flexibility and rapid deployment and contains rules specifically crafted to secure a broad variety of business processes and workflows including software development, IT management, customer care and HR call centers, as well as back office finance and payroll processing.

MANAGE OUTSOURCING RISKS

As companies exploit the benefits of outsourcing, they need data security capabilities that can manage the increased risks inherent in sharing proprietary and confidential information with partners that are located in remote locations around the world. Regulated companies, in particular, must ensure that their outsourcing providers maintain the same levels and standards of care in protecting private customer and employee data that would be expected within their own operations. Software and technology companies must assure shareholders that their intellectual property, the source of tomorrow's shareholder value, is adequately safeguarded against loss. Digital Guardian and the Outsourced Data Protection Solution Pack are ideally suited to helping companies satisfy a broad set of requirements for the audit and control of proprietary and sensitive data used in outsourced environments.

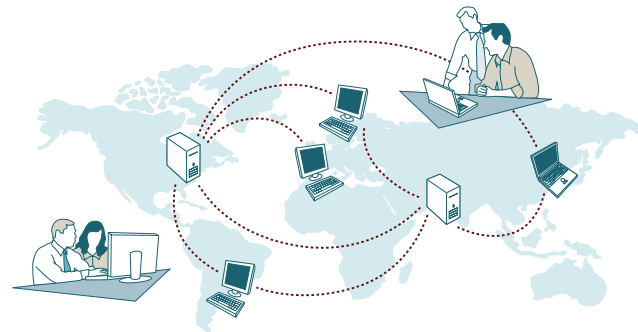

Detailed Online Query and Summarization Reporting for All Alerts and User Transactions

OVERSIGHT & CONTROL

Digital Guardian's Outsourced Data Protection Solution Pack is tightly integrated with the extensive analytics and drilldown reporting capabilities of Digital Guardian's Management Console. These powerful tools facilitate the detection and prevention of "high risk" user activities that may put sensitive information at risk. Real-time policy enforcement, along with a detailed audit trail, gives security staff and business managers centralized policy management and visibility into the use of information at remote partner sites *around the globe*.

DATA PROTECTION FOR THE GLOBAL ENTERPRISE

Digital Guardian's Outsourced Data Protection Solution Pack makes it easy to protect customer, employee & financial data in outsourced environments around the world.

Protect Confidential Documents: Prevent the unauthorized copying and/or transfer of proprietary documents and other files containing confidential information shared with outsourcing partners.

Protect New Product Designs and Specifications: Monitor and track the use of drawing, image, document, and other files containing new product concepts and detailed design information around the world.

Monitor the Flow of Intellectual Property: Centrally manage and track the location and flow of intellectual property through your organization, as well as through your partner/supply chain worldwide.
